To initially set up wireless, go to Start -> Control Panel -> Network and Sharing Center, then click “Change adapter settings” in the left-hand column.
Check to see that the Wireless Network Connection does not say “Disabled”. If it does, right click and select “Enable”. Once you have verified that the Wireless Network Connection is enabled, click the arrow in the upper left corner to return to the previous widow.
Click “Manage wireless networks” in the left-hand column.
Click “Add” on the horizontal menu bar.
Click “Manually create a network profile”.
In the Network name box, type “LSUHSC-Secure”; from the dropdown menu in the Security type box, select “WPA2-Enterprise”; then click the “Next” button.
Click “Change connection settings”.
Click “Security” tab.
Click “Settings” button.
Put a check in the box preceding “AddTrust External CA Root”, then click the “Configure” button under “Select Authentication Method:”. 
Remove the check in the box preceding “ Automatically use my Windows logon name and password (and domain if any).”, then click the “OK” button, and continue closing out until you are prompted to enter your username/password.
Enter your username and password, then click the “OK” button to login.
